🎬 Disney Shows Dashboard (Power BI Project)

📌 Project Overview

This project analyzes Disney+ content using Excel and Power BI to understand content distribution, ratings, and audience engagement. The dashboard provides an interactive view of movies and series based on genre, release year, ratings, and popularity.

🛠️ Tools Used

- Microsoft Excel
- Power BI

📊 Dataset

- **Source:** Sample Disney+ dataset
- **Key Columns:**
  - Title
  - Type (Movie / Series)
  - Genre
  - IMDb Rating
  - IMDb Votes
  - Year
  - Language
  - Country
  - Runtime

🔄 Steps Followed

1. Cleaned data in Excel (removed blanks, formatted columns)
2. Verified correct data types (Year, Rating, Votes, etc.)
3. Imported dataset into Power BI
4. Built dashboard using:
   - KPI Cards
   - Bar Chart (Top Rated Titles)

    - Donut Chart (Movies vs Series)
    - Line Chart (Titles by Year)
    - Map (Titles by Country)
5. Added slicers for:
    - Genre
    - Year
    - Country
6. Applied Top N filtering and sorting
7. Designed a clean and structured dashboard layout

📈 Key Insights

- Movies form the majority of content compared to series
- Top-rated titles stand out with significantly higher IMDb ratings
- Content production has increased in recent years
- Audience engagement is concentrated on a few highly popular titles
- Most content is produced in a limited number of countries

📂 Files Included

- disney_data.xlsx → Dataset
- dashboard.pbix → Power BI dashboard
- README.md → Project documentation

▶️ How to Use

1. Download the project files
2. Open dashboard.pbix in Power BI Desktop
3. Use slicers (Genre, Year, Country) to filter data
4. Explore visuals to analyze trends and insights
